

Speculations on Morals

I.—PLAN OF A TREATISE ON MORALS

That great science which regards nature and the operations of the human mind, is popularly divided into Morals and Metaphysics. The latter relates to a just classification, and the assignment of distinct names to its ideas; the former regards simply the determination of that arrangement of them which produces the greatest and most solid happiness. It is admitted that a virtuous or moral action, is that action which, when considered in all its accessories and consequences, is fitted to produce the highest pleasure to the greatest number of sensitive beings. The laws according to which all pleasure, since it cannot be equally felt by all sensitive beings, ought to be distributed by a voluntary agent, are reserved for a separate chapter.

The design of this little treatise is restricted to the development of the elementary principles of morals. As far as regards that purpose, metaphysical science will be treated merely so far as a source of negative truth; whilst morality will be considered as a science, respecting which we can arrive at positive conclusions.

The misguided imaginations of men have rendered the ascertaining of what IS NOT TRUE, the principal direct service which metaphysical science can bestow upon moral science. Moral science itself is the doctrine of the voluntary actions of man, as a sentient and social being. These actions depend on the thoughts in his mind. But there is a mass of popular opinion, from which the most enlightened persons are seldom wholly free, into the truth or falsehood of which it is incumbent on us to inquire, before we can arrive at any firm conclusions as to the conduct which we ought to pursue in the regulation of our own minds, or towards our fellow beings; or before we can ascertain the elementary laws, according to which these thoughts, from which these actions flow, are originally combined.

The object of the forms according to which human society is administered, is the happiness of the individuals composing the communities which they regard, and these forms are perfect or imperfect in proportion to the degree in which they promote this end.

This object is not merely the quantity of happiness enjoyed by individuals as sensitive beings, but the mode in which it should be distributed among them as social beings. It is not enough, if such a coincidence can be conceived as possible, that one person or class of persons should enjoy the highest happiness, whilst another is suffering a disproportionate degree of misery. It is necessary that the happiness produced by the common efforts, and preserved by the common care, should be distributed according to the just claims of each individual; if not, although the quantity produced should be the same, the end of society would remain unfulfilled. The object is in a compound proportion to the quantity of happiness produced, and the correspondence of the mode in which it is distributed, to the elementary feelings of man as a social being.

The disposition in an individual to promote this object is called virtue; and the two constituent parts of virtue, benevolence and justice, are correlative with these two great portions of the only true object of all voluntary actions of a human being. Benevolence is the desire to be the author of good, and justice

the apprehension of the manner in which good ought to be done.

Justice and benevolence result from the elementary laws of the human mind.

CHAPTER I ON THE NATURE OF VIRTUE

SECT. 1. General View of the Nature and Objects of Virtue.—2. The Origin and Basis of Virtue, as founded on the Elementary Principles of Mind.—3. The Laws which flow from the nature of Mind regulating the application of those principles to human actions;—4. Virtue, a possible attribute of man.

We exist in the midst of a multitude of beings like ourselves, upon whose happiness most of our actions exert some obvious and decisive influence.

The regulation of this influence is the object of moral science. We know that we are susceptible of receiving painful or pleasurable impressions of greater or less intensity and duration. That is called good which produces pleasure; that is called evil which produces pain. These are general names, applicable to every class of causes, from which an overbalance of pain or pleasure may result. But when a human being is the active instrument of generating or diffusing happiness, the principle through which it is most effectually instrumental to that purpose, is called virtue. And benevolence, or the desire to be the author of good, united with justice, or an apprehension of the manner in which that good is to be done, constitutes virtue.

But wherefore should a man be benevolent and just? The immediate emotions of his nature, especially in its most inartificial state, prompt him to inflict pain, and to arrogate dominion. He desires to heap superfluities to his own store, although others perish with famine. He is propelled to guard against the smallest invasion of his own liberty, though he reduces others to a condition of the most pitiless servitude. He is revengeful, proud and selfish. Wherefore should he curb these propensities?

It is inquired, for what reason a human being should engage in procuring the happiness, or refrain from producing the pain of another? When a reason is required to prove the necessity of adopting any system of conduct, what is it that the objector demands? He requires proof of that system of conduct being such as will most effectually promote the happiness of mankind. To demonstrate this, is to render a moral reason. Such is the object of virtue.

A common sophism, which, like many others, depends on the abuse of a metaphorical expression to a literal purpose, has produced much of the confusion which has involved the theory of morals. It is said that no person is bound to be just or kind, if, on his neglect, he should fail to incur some penalty. Duty is obligation. There can be no obligation without an obliger. Virtue is a law, to which it is the will of the lawgiver that we should conform; which will we should in no manner be bound to obey, unless some dreadful punishment were attached to disobedience. This is the philosophy of slavery and superstition.

In fact, no person can be BOUND or OBLIGED, without some power preceding to bind and oblige. If I observe a man bound hand and foot, I know that some one bound him. But if I observe him returning self-satisfied from the performance of some action, by which he has been the willing author of

extensive benefit, I do not infer that the anticipation of hellish agonies, or the hope of heavenly reward, has constrained him to such an act.

.....

It remains to be stated in what manner the sensations which constitute the basis of virtue originate in the human mind; what are the laws which it receives there; how far the principles of mind allow it to be an attribute of a human being; and, lastly, what is the probability of persuading mankind to adopt it as a universal and systematic motive of conduct.

BENEVOLENCE

There is a class of emotions which we instinctively avoid. A human being, such as is man considered in his origin, a child a month old, has a very imperfect consciousness of the existence of other natures resembling itself. All the energies of its being are directed to the extinction of the pains with which it is perpetually assailed. At length it discovers that it is surrounded by natures susceptible of sensations similar to its own. It is very late before children attain to this knowledge. If a child observes, without emotion, its nurse or its mother suffering acute pain, it is attributable rather to ignorance than insensibility. So soon as the accents and gestures, significant of pain, are referred to the feelings which they express, they awaken in the mind of the beholder a desire that they should cease. Pain is thus apprehended to be evil for its own sake, without any other necessary reference to the mind by which its existence is perceived, than such as is indispensable to its perception. The tendencies of our original sensations, indeed, all have for their object the preservation of our individual being. But these are passive and unconscious. In proportion as the mind acquires an active power, the empire of these tendencies becomes limited. Thus an infant, a savage, and a solitary beast, is selfish, because its mind is incapable of receiving an accurate intimation of the nature of pain as existing in beings resembling itself. The inhabitant of a highly civilized community will more acutely sympathize with the sufferings and enjoyments of others, than the inhabitant of a society of a less degree of civilization. He who shall have cultivated his intellectual powers by familiarity with the highest specimens of poetry and philosophy, will usually sympathize more than one engaged in the less refined functions of manual labour. Every one has experience of the fact, that to sympathize with the sufferings of another, is to enjoy a transitory oblivion of his own.

The mind thus acquires, by exercise, a habit, as it were, of perceiving and abhorring evil, however remote from the immediate sphere of sensations with which that individual mind is conversant. Imagination or mind employed in prophetically imaging forth its objects, is that faculty of human nature on which every gradation of its progress, nay, every, the minutest, change, depends. Pain or pleasure, if subtly analysed, will be found to consist entirely in prospect. The only distinction between the selfish man and the virtuous man is, that the imagination of the former is confined within a narrow limit, whilst that of the latter embraces a comprehensive circumference. In this sense, wisdom and virtue may be said to be inseparable, and criteria of each other. Selfishness is the offspring of ignorance and mistake; it is the portion of unreflecting infancy, and savage solitude, or of those whom toil or evil occupations have blunted or rendered torpid; disinterested benevolence is the product of a cultivated imagination, and has an intimate connexion with all the arts which add ornament, or dignity, or power, or stability to the social state of man. Virtue is thus entirely a refinement of civilized life; a creation of the human mind; or, rather, a combination which it has made, according to elementary rules contained within itself, of the feelings suggested by the relations established between man and man.

All the theories which have refined and exalted humanity, or those which have been devised as alleviations of its mistakes and evils, have been based upon the elementary emotions of disinterestedness, which we feel to constitute the majesty of our nature. Patriotism, as it existed in the ancient republics, was never, as has been supposed, a calculation of personal advantages. When Mutius Scaevola thrust his hand into the burning coals, and Regulus returned to Carthage, and Epicharis sustained the rack silently, in the torments of which she knew that she would speedily perish, rather than betray the conspirators to the tyrant [Footnote: Tacitus.]; these illustrious persons certainly made a small estimate of their private interest. If it be said that they sought posthumous fame; instances are not wanting in history which prove that men have even defied infamy for the sake of good. But there is a great error in the world with respect to the selfishness of fame. It is certainly possible that a person should seek distinction as a medium of personal gratification. But the love of fame is frequently no more than a desire that the feelings of others should confirm, illustrate, and sympathize with, our own. In this respect it is allied with all that draws us out of ourselves. It is the 'last infirmity of noble minds'. Chivalry was likewise founded on the theory of self-sacrifice. Love possesses so extraordinary a power over the human heart, only because disinterestedness is united with the natural propensities. These propensities themselves are comparatively impotent in cases where the imagination of pleasure to be given, as well as to be received, does not enter into the account. Let it not be objected that patriotism, and chivalry, and sentimental love, have been the fountains of enormous mischief. They are cited only to establish the proposition that, according to the elementary principles of mind, man is capable of desiring and pursuing good for its own sake.

JUSTICE

The benevolent propensities are thus inherent in the human mind. We are impelled to seek the happiness of others. We experience a satisfaction in being the authors of that happiness. Everything that lives is open to impressions or pleasure and pain. We are led by our benevolent propensities to regard every human being indifferently with whom we come in contact. They have preference only with respect to those who offer themselves most obviously to our notice. Human beings are indiscriminating and blind; they will avoid inflicting pain, though that pain should be attended with eventual benefit; they will seek to confer pleasure without calculating the mischief that may result. They benefit one at the expense of many.

There is a sentiment in the human mind that regulates benevolence in its application as a principle of action. This is the sense of justice. Justice, as well as benevolence, is an elementary law of human nature. It is through this principle that men are impelled to distribute any means of pleasure which benevolence may suggest the communication of to others, in equal portions among an equal number of applicants. If ten men are shipwrecked on a desert island, they distribute whatever subsistence may remain to them, into equal portions among themselves. If six of them conspire to deprive the remaining four of their share, their conduct is termed unjust.

The existence of pain has been shown to be a circumstance which the human mind regards with dissatisfaction, and of which it desires the cessation. It is equally according to its nature to desire that the advantages to be enjoyed by a limited number of persons should be enjoyed equally by all. This proposition is supported by the evidence of indisputable facts. Tell some ungarbled tale of a number of persons being made the victims of the enjoyments of one, and he who would appeal in favour of any system which might produce such an evil to the primary emotions of our nature, would have nothing to reply. Let two persons, equally strangers, make application for some benefit in the possession of a third to bestow, and to which he feels that they have an equal claim. They are both sensitive beings;

pleasure and pain affect them alike.

CHAPTER II

It is foreign to the general scope of this little treatise to encumber a simple argument by controverting any of the trite objections of habit or fanaticism. But there are two; the first, the basis of all political mistake, and the second, the prolific cause and effect of religious error, which it seems useful to refute.

First, it is inquired, 'Wherefore should a man be benevolent and just?' The answer has been given in the preceding chapter.

If a man persists to inquire why he ought to promote the happiness of mankind, he demands a mathematical or metaphysical reason for a moral action. The absurdity of this scepticism is more apparent, but not less real than the exacting a moral reason for a mathematical or metaphysical fact. If any person should refuse to admit that all the radii of a circle are of equal length, or that human actions are necessarily determined by motives, until it could be proved that these radii and these actions uniformly tended to the production of the greatest general good, who would not wonder at the unreasonable and capricious association of his ideas?

The writer of a philosophical treatise may, I imagine, at this advanced era of human intellect, be held excused from entering into a controversy with those reasoners, if such there are, who would claim an exemption from its decrees in favour of any one among those diversified systems of obscure opinion respecting morals, which, under the name of religions, have in various ages and countries prevailed among mankind. Besides that if, as these reasoners have pretended, eternal torture or happiness will ensue as the consequence of certain actions, we should be no nearer the possession of a standard to determine what actions were right and wrong, even if this pretended revelation, which is by no means the case, had furnished us with a complete catalogue of them. The character of actions as virtuous or vicious would by no means be determined alone by the personal advantage or disadvantage of each moral agent individually considered. Indeed, an action is often virtuous in proportion to the greatness of the personal calamity which the author willingly draws upon himself by daring to perform it. It is because an action produces an overbalance of pleasure or pain to the greatest number of sentient beings, and not merely because its consequences are beneficial or injurious to the author of that action, that it is good or evil. Nay, this latter consideration has a tendency to pollute the purity of virtue, inasmuch as it consists in the motive rather than in the consequences of an action. A person who should labour for the happiness of mankind lest he should be tormented eternally in Hell, would, with reference to that motive, possess as little claim to the epithet of virtuous, as he who should torture, imprison, and burn them alive, a more usual and natural consequence of such principles, for the sake of the enjoyments of Heaven.

My neighbour, presuming on his strength, may direct me to perform or to refrain from a particular action; indicating a certain arbitrary penalty in the event of disobedience within power to inflict. My action, if modified by his menaces, can no degree participate in virtue. He has afforded me no criterion as to what is right or wrong. A king, or an assembly of men, may publish a proclamation affixing any penalty to any particular action, but that is not immoral because such penalty is affixed. Nothing is more evident than that the epithet of virtue is inapplicable to the refraining from that action on account of the evil arbitrarily attached to it. If the action is in itself beneficial, virtue would rather consist in not refraining from it, but in firmly defying the personal consequences attached to its performance.

Some usurper of supernatural energy might subdue the whole globe to his power; he might possess new and unheard-of resources for enduing his punishments with the most terrible attributes or pain. The torments of his victims might be intense in their degree, and protracted to an infinite duration. Still the 'will of the lawgiver' would afford no surer criterion as to what actions were right or wrong. It would only increase the possible virtue of those who refuse to become the instruments of his tyranny.

II—MORAL SCIENCE CONSISTS IN CONSIDERING THE DIFFERENCE, NOT THE RESEMBLANCE, OF PERSONS

The internal influence, derived from the constitution of the mind from which they flow, produces that peculiar modification of actions, which makes them intrinsically good or evil.

To attain an apprehension of the importance of this distinction, let us visit, in imagination, the proceedings of some metropolis. Consider the multitude of human beings who inhabit it, and survey, in thought, the actions of the several classes into which they are divided. Their obvious actions are apparently uniform: the stability of human society seems to be maintained sufficiently by the uniformity of the conduct of its members, both with regard to themselves, and with regard to others. The labourer arises at a certain hour, and applies himself to the task enjoined him. The functionaries of government and law are regularly employed in their offices and courts. The trader holds a train of conduct from which he never deviates. The ministers of religion employ an accustomed language, and maintain a decent and equitable regard. The army is drawn forth, the motions of every soldier are such as they were expected to be; the general commands, and his words are echoed from troop to troop. The domestic actions of men are, for the most part, undistinguishable one from the other, at a superficial glance. The actions which are classed under the general appellation of marriage, education, friendship, &c., are perpetually going on, and to a superficial glance, are similar one to the other.

But, if we would see the truth of things, they must be stripped of this fallacious appearance of uniformity. In truth, no one action has, when considered in its whole extent, any essential resemblance with any other. Each individual, who composes the vast multitude which we have been contemplating, has a peculiar frame of mind, which, whilst the features of the great mass of his actions remain uniform, impresses the minuter lineaments with its peculiar hues. Thus, whilst his life, as a whole, is like the lives of other men, in detail, it is most unlike; and the more subdivided the actions become; that is, the more they enter into that class which have a vital influence on the happiness of others and his own, so much the more are they distinct from those of other men.

Those little, nameless, unremembered acts
Of kindness and of love,

as well as those deadly outrages which are inflicted by a look, a word—or less—the very refraining from some faint and most evanescent expression of countenance; these flow from a profounder source than the series of our habitual conduct, which, it has been already said, derives its origin from without. These are the actions, and such as these, which make human life what it is, and are the fountains of all the good and evil with which its entire surface is so widely and impartially overspread; and though they are called minute, they are called so in compliance with the blindness of those who cannot estimate their importance. It is in the due appreciating the general effects of their peculiarities, and in

cultivating the habit of acquiring decisive knowledge respecting the tendencies arising out of them in particular cases, that the most important part of moral science consists. The deepest abyss of these vast and multitudinous caverns, it is necessary that we should visit.

This is the difference between social and individual man. Not that this distinction is to be considered definite, or characteristic of one human being as compared with another; it denotes rather two classes of agency, common in a degree to every human being. None is exempt, indeed, from that species of influence which affects, as it were, the surface of his being, and gives the specific outline to his conduct. Almost all that is ostensible submits to that legislature created by the general representation of the past feelings of mankind—imperfect as it is from a variety of causes, as it exists in the government, the religion, and domestic habits. Those who do not nominally, yet actually, submit to the same power. The external features of their conduct, indeed, can no more escape it, than the clouds can escape from the stream of the wind; and his opinion, which he often hopes he has dispassionately secured from all contagion of prejudice and vulgarity, would be found, on examination, to be the inevitable excrescence of the very usages from which he vehemently dissents. Internally all is conducted otherwise; the efficiency, the essence, the vitality of actions, derives its colour from what in no way contributed to from any external source. Like the plant which while it derives the accident of its size and shape from the soil in which it springs, and is cankered, or distorted, or inflated, yet retains those qualities which essentially divide it from all others; so that hemlock continues to be poison, and the violet does not cease to emit its odour in whatever soil it may grow.

We consider our own nature too superficially. We look on all that in ourselves with which we can discover a resemblance in others; and consider those resemblances as the materials of moral knowledge. It is in the differences that it actually consists.
